

## **Aquin RBK now with Interface to Simcorp Dimension**

### **Aquin Investment Management Suite is integrated with Simcorp Dimension via DSGlue from Dynamic Solutions**

Aquin Components and Dynamic Solutions have integrated Aquin Components' Investment Management solutions with Simcorp Dimension (SCD) via standard connectors. These standard interfaces are based on DSGlue technology from Dynamic Solutions and allow rule-based customization to match individual customer requirements.

The regulatory reporting solution RBK is Aquin's first product integrated with Simcorp via DSGlue. The RBK-Simcorp connector was implemented in cooperation with one of Aquin's customers. It is used to generate annual and semi-annual reports on the basis of data from the Simcorp system in production.

As a next step, Aquin and Dynamic Solutions plan to build a standard connector between the Investment Compliance solution MIG21 and Simcorp Dimensions. „We expect that this connector will be well received by the market, since 65 percent of German Assets under Management are monitored with MIG21 and many German Simcorp Dimension users are MIG21 users as well“, comments Gerhard Thusek, Business Development Director at Aquin Components.

„The additional standard connectors from Dynamic Solutions provide seamless, robust and efficient integration of Aquin's best of breed investment management solutions with Simcorp Dimension“, acknowledges Bent Kramer, Managing Director of Dynamic Solutions.

With DSGlue, Dynamic Solutions from Luxembourg offers a comprehensive development and runtime environment for systems integration of complex, heterogeneous financial services business applications. Dynamic Solutions has many years of experience in interfacing to SimCorp Dimension and offers standard and customized solutions.
